ARE YOU IN INTERESTED IN ICT FOR SOCIAL CARE?
CareNET focuses on social inclusion through the **development of ICT competences for care recipients** above the age of 65 years in long term domiciliary care and care workers. Care workers’ care for elderly people goes beyond helping with cleaning, cooking and other daily tasks. Care workers need their vocational competences to be developed, competences in relation to enabling care recipients use ICT.

**WHAT WE DO**
CareNET carried out a **review** of the state of the art in Europe of **vocational training and adult education opportunities** on acquisition of digital competences. Care workers and care recipients’ behaviours that require digital competences were identified in order to define common ICT competences needed by the two target groups.
Based on this analysis, we created the **Map of domains for common and specific digital competences** for domiciliary care workers and care recipients aged 65 and older. This result was possible thanks to the collaborative exercises that outlined the methodological bottom-up approach.

We also developed modular **learning paths and resources** to pilot them this autumn involving 150 care workers and their clients in Spain and France. These learning events foster employability of care workers and support active ageing among older people. In addition **learning centres** and a **virtual learning environment complete the picture**, composed of a learning platform, a social network and a competence wiki, to support the peer-learning and self-training.

**JOIN US**

at our **two seminars and international conference** in the beginning of 2014. See how it works and be part of further developments!
